Reporting	✓	✓
Scalability: no imposed device limit	✓	✓
Security management	✓	✓
Task management	✓	✓
User provisioning	✓	✓
Perpetual licence per device	✓	✓
Affordable annual support	✓	✓

*additional cost option

Fusion UEM handles static and mobile devices with the same grace - including those within BYOD policies.

Automated administration

If it can be automated, it should be. That way you're freed up to do more important things. Gathering information for dashboards, running event-based actions, automating tasks - let Fusion UEM get on with those, freeing up your time to do something more important.

Compliance as standard

Unlike some systems, compliance is built right into Fusion UEM. Keeping your organisation within the law, buying only those licences you need and keeping audit records - it all comes as standard.

Discoverability for every device

With agentless discovery alongside industry-standard discovery protocols, Fusion UEM can quickly locate any and every one of your devices: including legacy Android devices, which are often not supported by other products.

Scalable

Unlike most device-management software, Fusion UEM isn't just for large companies. Ten devices? Fine. Ten thousand? No problem. More? Fusion UEM can handle them with ease.

Simplified management

Fusion UEM delivers A-grade monitoring of all devices - with incredibly simple remote deployment of commands, patches and updates.

Mobile device management

Fusion UEM's extensive device-management capabilities allow you to monitor and manage devices in a granular manner, including monitoring device performance, online status, content and more. In addition, authorised administrators can make automatic changes to many settings of company-owned devices, using device group profiles. Productivity features include the ability to provide users with access to the company e-mail systems in a secure manner. Security features include disabling of in-built peripherals such as cameras, initiating remote-wipes of company-owned apps and information, and locking devices when required.

Mobile application management

Powerful mobile application management allows complete control over which applications are made available to users, either on a one-by-one basis or using built-in group profiling. New applications or updates can be pushed silently to devices as and when required. Corporate applications are kept separate from personal applications, so network access can also be restricted to the company's own networks for specific applications. Fusion UEM's application store allows users to choose which applications to install, their choice limited to the current application profile.

Mobile content management

Fusion UEM ensures that mobile users can easily access internal document stores, including content-management systems like SharePoint. Advanced encryption enables e-mail attachments to be delivered, stored and accessed securely. Fusion UEM can also monitor and restrict access to specific URLs, in order to maintain organisations' security policies. Fusion Secure Channel makes VPNs a thing of the past, providing safe and secure communications between device and corporate networks.

Mobile monitoring and analytics

Fusion UEM includes a wealth of monitoring and analytical tools. Application usage can be monitored, as well as cellular, data and wi-fi usage; additional benefits are provided by the geo-location tracking and alerting system that is a standard feature of the platinum edition.

Exemplary endpoint-management

Fusion UEM enables organisations to manage both user- and company-owned smartphones and tablets that run Android, iOS and Microsoft Windows 10 Mobile - giving users the single-device flexibility they require, whilst ensuring that the enterprise network, and its data, are kept secure.

Fusion UEM

Your IT – unified, simplified, controlled

As IT infrastructure grows, so does the number of tools needed to manage it. Fusion UEM provides a centralised management console, replacing the disparate collection of tools on which many IT departments currently rely, vastly simplifying network and device administration.

Management made simple

Fusion UEM includes a complete discovery and management toolkit, enabling you to index and administer every device quickly and easily. Granular reporting allows you to monitor and audit every device, a select group of devices or specific machines. Discovery tools can catalogue and manage both mobile and static devices, regardless of location. Fusion UEM delivers a comprehensive overview of network assets, providing details on software patches, licences and operational health data.

Granular control as standard

The simple-to-use interface belies the power of Fusion UEM's comprehensive administration tools. Thin clients, PCs, laptops, kiosks, tablets and smartphones are all instantly visible and configurable through a single unified interface. Fusion UEM supports a wide range of operating systems, providing a complete management toolkit for every device. Built-in software metering allows you to deploy and manage licences, ensuring full use of your resources. Additional tools enable your team to closely monitor software, including antivirus patch levels, and to deploy updates quickly and easily.

Increased automation

Fusion UEM automates many low-level operations. Built-in scheduling tools allow the automated creation of tasks and profiles on remote devices – for example, simplifying deployment of drive mappings and printer settings. PowerShell, VBScripts and shell scripts can also be remotely executed. Fusion UEM assists with unattended management activities, using event-based actions to deploy updates, allocate licences or execute scripts for advanced reconfiguration.

Many locations, one interface

Fusion UEM scales seamlessly with the multi-tenancy add-on, allowing IT service providers and system integrators to manage multi-company IT resources affordably and effectively. All assets, regardless of location, are available for management and reporting through our single interface – centralising and simplifying IT management.

Every device, all from one dashboard

Fusion UEM enables you to manage every device from a single dashboard, vastly simplifying device management.

Desktops

Laptops

Thin clients

Smartphones

Tablets

Servers

Printers

Routers

Network devices

One device manager for everything

Our unified endpoint management suite, Fusion UEM, can manage almost every device on your network – or on a mobile network – including smartphones, tablets, desktops, laptops, thin clients, servers, routers* and more.

Key features

- **Advanced scheduling** – automate regular, complex tasks easily.
- **Application installation made simple** – customised Play/App Store*.
- **Cloning and deployment** – create copies of managed devices to deploy new devices with a few clicks.
- **Comprehensive OS support** – Android, Android Enterprise, Apple iOS (DEP and non-DEP), Windows, Windows 10 Mobile and Linux. Fusion UEM's Android support isn't just for the latest OS versions: it delivers the same management power to older Android devices too.
- **Ease of installation and use** – makes administration quick and simple.
- **Group profiles** – group users together to perform common tasks in one go.
- **Kiosk-mode security** – full prevention of system access outside of on-screen tasks.
- **Outstanding value for money** – *at least* feature parity with leading products, at a far lower price.
- **Patch management** – push out software updates and patches quickly and easily.
- **Regulatory compliance and budgeting** – detailed hardware and software inventories.

Powerful management software for both mobile and static devices – at an outstanding price

Fusion UEM is a powerful, unified endpoint-management suite. Feature-for-feature, it beats other device managers – and leads the market in terms of value for money.

* Some features may not be present in the version you have purchased, but will be available as part of future updates and upgrades.
